Allowable Subject Matter

- 1. Claims 1-45 are allowed.
- The following is an examiner's statement of reasons for allowance: Regarding 2. claims 1-45, the prior art of record fails to teach of a packet server for that determines a number of expected packets to be lost for the received packet stream in accordance with a random loss model and determines a burst ratio from the determined number of packets lost to the number of expected packets to be lost wherein the burst ratio equals $1/(1+\alpha-\beta)$ where α is a probability of losing packet n if packet n-1 was found and β represents a probability of losing packet n if packet n-1 was lost. The closest reference, Horn et al. "Robust Internet video transmission based on scalable coding and unequal error protection", teaches of a packet loss model, the probability of losing a packet and average burst length, but fails to teach of a packet server for that determines a number of expected packets to be lost for the received packet stream in accordance with a random loss model and determines a burst ratio from the determined number of packets lost to the number of expected packets to be lost wherein the burst ratio equals $1/(1+\alpha$ - β) where α is a probability of losing packet n if packet n-1 was found and β represents a probability of losing packet n if packet n-1 was lost. Additionally, Kamoi et al. (U.S. Patent No. 5,280,483), teaches of a packet server and determining a burst ratio, but fails to teach of the burst ratio being a ratio of a function of experienced packet loss to a loss expectation for the packet stream.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
